best possible version in available time

Pipeline = people working together
be organized give proper file names

make a time table
create a breakdown of assets, sequences, shots
create a task template
create a list of all tasks track whats done
Define a naming convention and folder structure
script and automate with python
↳ Benefits
transparent => everyone knows everything
easy onboarding => external people can join with less effort
efficiency => everything is logical, both people and computer
knows where the latest files are

Planning
Time + budget = quality
take one small piece from every department make milestones
know your goal audience and budget
every asset, sequence and shot gets a task template
use tickets for issues fixes status and history
use external tools that fits your team

Treat ai as a project used files
if it affects people, a human decides
Be honest with your client and your audience
if ai used label it

soft skills matter
